Demonstration artifact generated with realistic placeholder data — not a real client engagement.

Customer Support Email Triage Agent — Pilot Proposal

Prepared for Northwind Trading Co. by CompleteTech LLC. This proposal scopes a bounded, evaluation-first pilot. It becomes a contract or invoice input only after written approval.

01 | Executive Summary

Northwind's support team hand-triages ~850 emails per day, producing a 6–9 hour first-response lag. We propose an 8-week pilot that builds an agent to classify inbound email, draft grounded replies, and recommend routing — with a human approving every customer-facing send. Success is measured against a labeled test set before any production use.

02 | Objectives

- Reduce first-response preparation time from hours to minutes.
- Increase routing consistency across the five support queues.
- Prove control and safety with human approval gates and logged evaluation.

03 | Scope of Work

- Discovery confirmation: queue taxonomy, approved help-center subset, data boundaries.
- Build: classification, retrieval-grounded reply drafting, and routing recommendation.
- Human-in-the-loop approval workflow before any send or escalation.
- Evaluation: labeled test set, reply-quality rubric, and prompt-injection checks.
- Documentation, operator runbook, and handoff.

04 | Out of Scope (this pilot)

- Autonomous sending without human review.
- Production deployment beyond the sandbox mailbox (separate change order).
- Payment-card or full-credential data handling.

05 | Approach & Timeline

Phase	Weeks	Outcome
Discovery confirmation	1	Locked taxonomy, data boundaries, test-set plan
Prototype	2–4	Working classify/draft/route on sandbox mailbox
Evaluation	5–6	Accuracy + safety results on held-out cases

Phase	Weeks	Outcome
Documentation & handoff	7	Runbook, operator quickstart, monitoring plan
Buffer	8	Fixes from acceptance review

06 | Commercials

Term	Value
Engagement type	Fixed-fee pilot
Fee	USD 28,000
Deposit	USD 8,400 at signing
Payment terms	Net 15 from invoice date
Included revisions	Two review rounds per major deliverable

07 | Acceptance Criteria

- Routing accuracy at or above 90% on the held-out labeled test set.
- Reply-quality rubric average at or above 4 of 5 across sampled drafts.
- Zero customer-facing replies sent without human approval.

08 | Assumptions & Exclusions

Pricing assumes a sandbox mailbox, access to ~90 current help-center articles, and legal approval to use de-identified historical email for the test set.

- New queues, channels, or languages are handled by written change order.
- Northwind owns model/provider account configuration and production authorization.

09 | Recommended Next Step

Approve this pilot direction so we can issue the Agentic Development Services Agreement and a deposit invoice, then schedule kickoff.
